APPLICANT: FORSEMANN, Wolf-Georg; FORSEMANN, Ulf; ADERWANN, Knut;

APPLICANT: HETTLAND, Aleksandra; SPODSBERG, Nikolaj

TITLE OF INVENTION: Cell Surface Proteome of Tumor and Inflammation Cells and TITLE OF INVENTION: For Treating Tumor Diseases and Inflammation Cells and TITLE OF INVENTION: Preferably with the Aid of Specific Chemokine

TITLE OF INVENTION: Receptor Analysis and Chemokine Receptor/Ligand Interaction

FILE REFERENCE: 022217us

CURRENT APPLICATION NUMBER: DE10016013.1

PRIOR FILING DATE: 2002-09-23

CURRENT FILING DATE: 2000-03-31

NUMBER OF SEQ ID NOS: 84

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 79

LENGTH: 352

LENGTH: 352

LENGTH: 352

CORANISM: Artificial Sequence
                                                                                                                                                                                                                                                                                                                                                                  1;

Anceular cloning of rat CXCR4";
Submitted (MAR-1997) to the EMBL/GenBank/DDBJ databases.

List of the CXC Chemokine SDF-1. Transduces a signal by increasing the intracellular calcium ions level:

Involved in B-cell lymphopoissis, bone-marrow wyelopoiesis and in cardiac ventricular septum formation. Plays also an essential role in vascularization of the gastrointestinal tract, probably by requiation, preventing premacure migration of processes in endothelial cells. Involved in cerebellar neuronal layer formation, preventing premacure migration of proliferating granule cells from the external granule layer inwards. In the CNS, could mediate hippocampal-neuron survival (By similarity).

Listuic SPECIFICITY: Expressed in neurons and in astrocytes.

Listing SPECIFICITY: Expressed in neurons and in astrocytes.

List SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

G-protein coupled receptor; Transmembrane; Glycoprotein; Sulfation.

G-protein coupled receptor; Transmembrane; Glycoprotein; Sulfation.
                                 Benton P.A., Timanus D.K., Shearer M.H., Lee D.R., Kennedy R.C.; Submitted (NOV-1997) to the EMBL/GenBank/DBJ datebases.
-1- FUNCTION: Receptor for the C.X.C chemokine SDF-1. Transduces a signal by increasing the intracellular calcium ions level.
- SUBCELDIULAR LOCATION: Integral membrane protein.
-1- FTM: Sulfated (By similarity).

I "A proposed bovine neuropepide Y (NPY) receptor cDNA clone, or its
human homologue, confers neither NPY binding sites nor NPY
responsiveness on transfected cells.";
Regul. Pept. 47:247-258(1993).
C --- FUNCTION: Receptor for the C-X-C chemokine SDF-1. Transduces a
signal by increasing the intracellular calcium ions level.
C --- SUBCELLULAR LOCATION: Integral membrane protein.
C --- TISSUB SPECIFICITY: Brain, heart, Kidney, lung and liver.
C --- FIFT SUBJECTIVITY: Belongs to family 1 of G-protein coupled receptors.
C --- CAUTION: Was originally (Ref.1) thought to be a receptor for neuropeptide Y type 3 (NPY3-R).
                                                                                                                MEDLINE=92100053; PubMed=1661837; RinHand J., Xin W., Sweetnam P., Saijoh K., Nestler E.J., Duman R.S.; Radhland J., Xin W., Sweetnam P., Saijoh K., Nestler E.J., Duman R.S.; "Sequence and expression of a neuropeptide Y receptor cDNA."; "Nol. Pharmacol. 40:869-875(1991).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PIR; S28787; S28787.

-I. FUNCTION: High affinity receptor for the C-C type chemokines TARC/SCYA17 and MC/SCYA22. The activity of this receptor is mediated by G(i) proteins which activate a phosphatidylinositol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    EXTRACELLULAR (POTENTIAL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2 (POTENTIAL).

interleukin-8 receptors."; J. Biol. Chem. 271:32770-32776(1996). J. Biol. Chem. 271:32770-32776(1996). J. Biol. Chem. 271:32770-32776(1996). J. Biol. Chem. 271:32770-32776(1996). J. STUCTION: Receptor to interleukin-8, which is a powerful neutrophils chemotactic feature. Binding of IL-8 to the receptor Gauses activation of neutrophils. This response is mediated via a G-protein that activate a phosphatidylinosticl-calcium second messenger system. This receptor binds to IL-8 with a high affinity. J. SUBCELLIARA LOCATION: Integral membrane protein. J. SUMILARITY: Belongs to family 1 of G-protein coupled receptors.	SWISS-PROT entry is copyright. It is produced through a collaborateen the Swiss Institute of Bioinformatics and the EMBL outstatic	the European Bioinformatics Institute. RT IL-8 receptor.";

T. IL-8 receptor.";

J. Immunol. 148:1126-11264(1992).

C. -! FUNCTION: Receptor to interleukin-8, which is a powerful neutrophils chemotactic factor. Binding of IL-8 to the receptor causes activation of neutrophils. This response is mediated via a C.C. G-protein that activate a phosphatidylinositol-calcium second messenger system.

C. G-protein LAM COATION: Integral membrane protein.

C. -! SUBCELFULAR LOCATION: Integral membrane protein.

C. -! SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

C. -! CAUTION: Was originally (Ref. 2) thought to be the receptor for C. -! CAUTION: Was originally leptide receptor).

Consortium/LIML at: http://image.llnl.gov Series: IRAK plate: 61 Row: d Column: 24
This clone was selected for full length sequencing because it passed the following selection criteria: Similarity but not identity to protein.

Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GIVILSCYCIIISKLSHSKGHQKRKÄLKTTVILILAFPACWLPYYVĞIĞIDSFILLGV
